*Rapid Recovery > Integrated > Simple > Elegant*

## > Affordable Protection

It's your responsibility to protect your business. It's also your responsibility to grow your business. Unitrends™ allows you to do both.

Our disk-based data protection appliances are engineered from the ground up to provide integrated, simple, and elegant enterprise-level backup, archiving, and disaster recovery. We're obsessively focused on lowering our customers' total cost of ownership and raising their return on investment. Because we understand that you have to both protect and grow your business.

Founded in 1989, with thousands of customers, Unitrends is the leading provider of all-in-one integrated data protection appliances.

## > Enterprise-Level Strength

Our backup, archiving, and disaster recovery appliances are enterprise-level products that protect more than 100 versions of hypervisors, operating systems, applications, computer platforms, and storage platforms.

We support clusters, SAN, NAS, and DAS (Direct Attached Storage) and work with existing snapshot capabilities as well as providing our own.

We support dissimilar bare metal on a physical-to-physical, physical-to-virtual, and virtual-to-physical level. We support VMware's VADP-based host-level protection and CBT (Change Block Tracking.) And much more...

Our higher-end appliances use staged RAID-1/RAID-6 storage architectures while our midrange use RAID-10. All of our appliances support deduplication.

## > Scalable

---

Our single-pane-of-glass web 2.0 management enables you to handle from one to hundreds of our appliances from a sophisticated and yet simple user interface.

## > No Limits

---

Our No Limits™ licensing means that all of the major features of our appliances are available for our customers – no separate charges on a per-client basis or for integral features such as deduplication, virtualization, archiving, or disaster recovery.

## > Disaster Recovery

Unitrends™ offers public multiple tenant cloud-based disaster recovery via its Vault2Cloud service. This easy to use service is priced below many commodity-based online backup providers.

We also offer private single tenant cloud-based disaster recovery. The personality of our appliances can be defined such that the same hardware platform can be either an on-premise backup device, an off-premise disaster-recovery device, or both at the same time.

## > Dazzling U.S.-Based Customer Support

We're customer obsessed; not technology obsessed. But rather than us tell you, we'll let our customers and partners speak for themselves.

*"It's just a great product supported by great people"*

Mike Stewart - **Blue Ridge School District**

*"Support has always been great, they're very quick to respond, and they always follow through"*

Kevin Hughs - **Sharonview Credit Union**

*"Unitrends offers great support...always excellent, timely, and thorough"*

Patricia Lench - **Minnesota Counties**

*"The Unitrends support has some of the best people I've worked with"*

Scott D'Amore - **BPI Information Systems**

*"These days you find more support personnel that barely understand anything outside their product, or even how their product interacts with other systems. Somehow 'exceptional' seems completely inadequate"*

Matt Johnson - **Community Action of Minneapolis**

## > **Data Protection** for Today and Tomorrow

---

We believe that it's important that we continue keeping pace in supporting advanced features and in supporting the progress that our hypervisor, operating system, application, computer, and storage partners continue to make each day.

We're committed to continue to invest and create partnerships with the best technology companies and resellers that will enable us to continue to be the leader in integrated all-in-one data protection appliances.
