## Put it to Work

### **Award-Winning Physical Therapy Practice Rehabilitates Their Accounting System with Help from IDT Consulting and Microsoft Dynamics GP**

ATI Physical Therapy, *ADVANCE Magazine's Best Private Physical Therapy Practice in the Nation for 2006*, was challenged with replacing an accounting system that had become increasingly difficult to manage and limited in its features as their business flourished and their financial system requirements changed. Facing major organizational structure changes, ATI also needed sophisticated financial controls, enhanced security, robust audit trails to ensure data integrity, and advanced financial reporting across branches – something their current financial software setup could not facilitate.

[Read the full customer story](#) to find out how ATI met their challenge and enabled their business processes to go from manual and cumbersome to automated and streamlined with help from IDT Consulting.

### **Green Archival Storage: A white paper that explores the energy cost and environmental impact of common archival storage technologies**

*Expedite regulatory compliance and make good governance a business advantage*  
Excerpt: "Rising electricity costs, new legislation on climate change and increased environmental awareness are all factors driving organizations to take a careful look at the energy consumption of their IT infrastructure. Choosing energy efficient IT products and

strategies can dramatically reduce escalating electricity bills and improve operational efficiencies while developing environmentally responsible corporate policies. One area where significant green gains can be realized is in the archival storage of business information.”

**Question: “What's new in Microsoft Dynamics GP 10.0?”**

**Answer:** Microsoft Dynamics GP 10.0 provides business owners with such features as increased business functionality, a more intuitive user interface and the introduction of structured and unstructured search, which allows a person to more easily track down important business information.

Businesses that have been using and benefiting from an early release of the product especially liked that:

- **It is easier to use.** “Action Panes virtually eliminate the need to search around for what to do next and how to do it.”
- **It's got great features** like “the ability to drill down and generate financial reports using the capabilities available in SQL Server and Office applications such as Excel services.”
- **It can help increase the use of business intelligence.** Users can determine, for example, “what was sold yesterday, the number of orders in the pipeline, and what's going on with the financials relative to budget.”

To find out more about Microsoft Dynamics GP 10.0 contact your IDT Consulting representative and check out the following:

**Also, as a reminder, support for Microsoft Great Plains 8.0 and Microsoft Great Plains 8.0 Standard Ends Oct. 9, 2007.**

Microsoft Business Solutions will end support for Microsoft Great Plains 8.0 and Microsoft Dynamics Great Plains 8.0 Standard on Oct. 9, 2007. Customers who are currently using payroll need to upgrade to a newer version of Microsoft Dynamics GP to receive support tax and regulatory updates as the updates for Microsoft Great Plains 8.0 will end October 9, 2007.

For more information specific to Microsoft Dynamics and the support lifecycle, read the [Microsoft Dynamics Support Lifecycle Policy FAQ](#).

For general information on this policy, visit the [Microsoft Support Lifecycle Web site](#).

**IDT to Host Content Management 101 Event July 24<sup>th</sup>**

It's not what you don't know that can hurt you. It's what you can't find. Imagine the time you can save by searching for documents with a simple keyword search, from the convenience of your desktop. Create digital files from archived and active paper documents—including all externally generated documents—avoiding costly storage rooms crowded with filing cabinets full of paper files.
