The First Steps to Achieving Effective Inventory Control

By Jon Schreibfeder

Compliments of Microsoft Business Solutions

"Effective inventory management is the result of outstanding inventory control and inventory management. What is the difference between 'inventory control' and 'inventory management?' Inventory control involves managing the inventory that is already in your warehouse, stockroom or store. That is, knowing what products are "out there," how much you have of each item, and where it is.

Inventory management involves determining when to order products and how much to order, as well as identifying the most effective source of supply for each item in each stocking location. Inventory management includes all of the activities of forecasting and replenishment.

The most common question asked is 'where do we start?' The answer is: You must begin with inventory control. Unless you know exactly what inventory is in your warehouse and that material is in usable condition, you can't accurately determine when to reorder products."

IT Auditors to Build on Sarbanes Experience in Year 2

By Steve Stanek, [KnowledgeLeader](#) contributing writer

Source: Protiviti's KnowledgeLeader Internal Audit and Risk Management Community

Now that public companies are moving into Year 2 of Sarbanes-Oxley Act compliance, Information Technology auditors have "a huge opportunity" to make IT audits more useful and easier to do, according to David Hartley, Director of Technology Risk in Protiviti's St.Louis, Mo., office.

Get it Together: Consolidate Resources and Reduce Costs by Integrating Enterprise Fax with Your Multifunction Products

Courtesy of Captaris

Anyone that has ever managed multiple printers, scanners, copier and fax machines knows that consolidating these services on a Multifunction Product (MFP) can save valuable time, resources and office space. And anyone who has ever wasted time walking from one machine to another to print, scan, copy and fax documents knows that it is more efficient too use a centralized solution to develop, duplicate and distribute your business documents.

And the benefits do not have to stop there. To further extend the cost, time and productivity savings of MFPs, smart organizations are integrating fax and e-document delivery software with their systems.

Question: Is there a way to significantly reduce or eliminate the need for the use of separator pages during the document prepping process, such as blank pages and/or patch codes?

Answer: Yes, Kofax has recently released a new software application called Kofax Indicius 5.0. Indicius is a powerful suite of modules, tightly integrated with Ascent that provides advanced document classification, separation and extraction capabilities, enabling the automated processing of more types of business documents. On a related side note, Kofax's INDICIUS was the honored recipient of the "Best of Show Award for Document Imaging at AIIM 2005." The award recognizes Enterprise Content Management (ECM) hardware and software technologies that demonstrate exceptional capabilities and quality, and show evidence of significant ROI (return on investment) potential. Read the full story [here](#).

For organizations that scan and capture their documents, appropriate handling used to mean spending considerable time and money pre-sorting those documents prior to scanning, adding document separation (patch code) sheets, and manually classifying the documents prior to data extraction.

With Indicius, you can now eliminate this laborious and costly process, enabling your business to automatically process documents that have little or no structure.

For more information on what this may mean to you and your business, get in touch with your Account Manager or send an email to info@idt-inc.com

Kofax Ascent version 7.0 is coming soon!

New Captaris Fax Archiving Solution Integrates RightFax Document Delivery with Alchemy Document Management.

Faxes are automatically archived for compliance, lifecycle management and fast retrieval

Philadelphia PA — May 17, 2005 — Captaris, Inc. (NASDAQ: CAPA), a leading provider of Business Information Delivery solutions, announced the RightFax Archive Link for Alchemy at the AIIM ON DEMAND Conference. This new module provides an out-of-the-box integration for Captaris RightFax, the leading fax server and document delivery solution, and Captaris Alchemy Document Management. The combined solution will empower organizations to easily comply with fax retention requirements, provide any department with quick access to fax documents, lower the cost of archive storage, and respond rapidly to discovery demands. The RightFax Archive Link for Alchemy also integrates fax documents and data into the Alchemy records management system along with all other document types, thus meeting IT demands for vendor consolidation and a common electronic records management environment.
