The Easiest Path to EMR: Healthcare Document Management for Provider Organizations

A Laserfiche White Paper

The healthcare industry is under intense pressure to move beyond paper. The President's 10-year Electronic Health Record (EHR) initiative, post-Katrina disaster awareness and public concern have focused attention on electronic patient record solutions. Vendors of Electronic Medical Record (EMR) systems have benefited most from the attention, and EMR adoption among providers has become the measuring stick for progress toward electronic patient records.

But EMR adoption remains low among a significant portion of healthcare provider organizations. This paper discusses ways to overcome the factors that make it difficult to get the full benefits from EMR, defines key terms and covers the importance of healthcare document management, both as a critical component of EMR and as a cost-effective transition tool for practitioners and group practices. Indeed, for many healthcare providers, healthcare document management is the easiest path to EMR.

Microsoft Dynamics GP and Microsoft Dynamics CRM: Great alone, even better together

Make it easier for your people to make customers happier! Microsoft Dynamics GP, Microsoft Dynamics CRM together can help improve employee productivity, customer satisfaction, and company performance. Both Microsoft Dynamics GP and Microsoft Dynamics CRM are powerful business-management solutions that can empower people and organizations by allowing easy access to information where and when people need it. When integrated, the latest versions of these two solutions offer even more promise for business success. Together, they help you equip your organization with a complete view of customer information and broad, deep business management capabilities. In addition, both are integrated with the Microsoft Office System, and both are designed for rapid implementation, customization, and maintenance.

Ask the Expert

Question: What is Information Capture?

Answer: Information Capture is a flow of processes that includes scanning but extends much further. Check out this ["infotoon"](#) from Kofax to find out all about Information Capture and its stages. You'll also learn about things like recognition, image clean-up, indexing, quality control, and release.

News & Events

Critical Microsoft Security Updates for August

IDT is passing along these 12 updates, which were released on August 8th and updated on August 24th. Nine of these are critical updates. *Due to the critical nature of these updates, please review these bulletins and take appropriate action.*

Among the 12 security bulletins, MS06-040 was issued to resolve a privately disclosed vulnerability as well as additional issues discovered through internal investigations. There is a remote code execution vulnerability in Server Service that could allow an attacker who successfully exploited this vulnerability to take complete control of the affected system. An attacker could then install programs; view, change, or delete data; or create new accounts with full user rights. As a result, we are recommending that customers apply the update immediately. The vulnerability affects the following Microsoft Windows software:

- Microsoft Windows 2000 Service Pack 4
- Microsoft Windows XP Service Pack 1 and Microsoft Windows XP Service Pack 2
- Microsoft Windows XP Professional x64 Edition
- Microsoft Windows Server 2003 and Microsoft Windows Server 2003 Service Pack 1
- Microsoft Windows Server 2003 for Itanium-based Systems and Microsoft Windows Server 2003 with SP1 for Itanium-based Systems
- Microsoft Windows Server 2003 x64 Edition

More information about these particular updates can be found [here](#).

Captovation Announces the Release of Check Capture 5.1

Newest version of check imaging software includes features to facilitate electronic check exchange and presentment

MINNEAPOLIS, August 10, 2006 — Captovation, Inc., a developer of document and check capture software, is proud to announce the release of Captovation® Check Capture 5.1. The newest version of this check imaging software offers an economical system for forward presentment in the Check 21 electronic check exchange (ECE) environment. Check Capture 5.1 enables financial institutions to capture checks at their earliest point of presentment, encode them using CAR/LAR technology, output a X9.37 file or image cash letter, and transfer checks electronically to a check clearinghouse or paying bank.
