IDT and Manufacturing

Pressures to increase productivity while reducing costs present ongoing challenges for manufacturers. To address this challenge, many corporations are embracing new and innovative technology solutions to assist them in managing a range of business areas including accounts payable, inventory control, order fulfillment, Web site content management and more.

Whether your company handles hundreds or thousands of orders, applications, invoices, or computer-generated forms, Integrated Document Technologies can design the enterprise content management systems that will help you redefine how you manage these processes, giving you a competitive edge.

IDT tailors solutions to specific client needs, and caters to a host of industries, including manufacturing. Companies trust IDT to do more than supply a product. They know that with more than a decade of experience in solving real-world business problems, IDT has the technical expertise to deliver a comprehensive solution that will fit their unique business needs.

Highlighted here is a review of some of IDT's work with manufacturing clients.

International Truck and Engine Corporation
Rolling Meadows, IL

Contracts, invoices, purchase orders, accounting documents and related reports at this truck and bus manufacturer are handled faster and more efficiently. An automated enterprise content management system leverages imaging, retrieval and optical storage technologies.

Solution Components: IDT System Design and Consulting services, **Stellent** software

Greenlee Textron
Rockford, IL

"Out with the old, in with the new" is not always feasible given the unrelenting cost and speed required to stay current with changing technology. Greenlee Textron is now able to take advantage of the latest B2B software solutions by integrating new system elements with existing infrastructure components thanks to the IDT MagnumPOWER™ suite of software products that effectively bridges the two systems.

Solution Components: IDT System Design and Consulting services, **MagnumPOWER™** software, **Kofax** software, **Stellent** software

Shure Incorporated
Niles, IL

The new technology helps Shure associates share information more efficiently, and get products to market faster. Workflow is also greatly enhanced by the system, to the extent that it can even help direct associates to follow new workflow procedures. The system is handling thousands of pieces of content from content contributors *worldwide.* Operational efficiency benefits are also clear, both internally and externally: customers can go online to make purchases, making it easier to do business with Shure.
