

SHAREBASE BY HYLAND

Automate sharing. Empower users. Retain control.

With ShareBase by Hyland, empower users with enterprise file sync and share (EFSS) technology and retain control over information shared outside your organization.

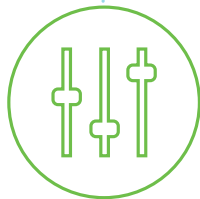

HIGHLIGHTS

IMPACT

Interacts with your existing OnBase solution

Enables automated document sharing as part of your business processes. This reduces bottlenecks caused by the manual copying and pasting of files into disconnected or unsanctioned sharing tools.

Controls usage with corporate email addresses, not personal accounts

Ensures your organization retains control of all shared content. Revokes access and allows easy transfer of ownership as users leave or change roles.

Utilizes our purpose-built cloud, not public shared clouds

Hosts your data in a cloud designed for content management. Your information is never co-mingled with another company's and you will know exactly where it is located.
